

Committed to Sustainability

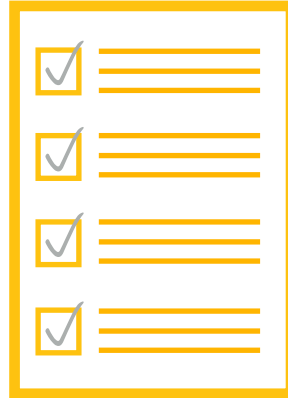

in Lateral
Patient Transfer

Enhance Your Financial and Environmental Sustainability.

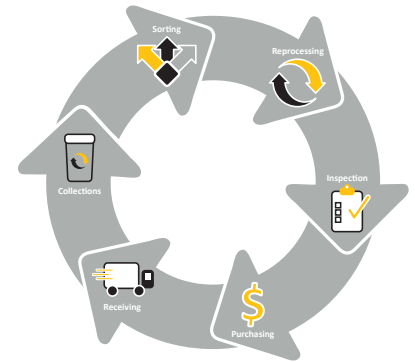

For more than 20 years, hospitals like yours have depended on Stryker's reprocessing program to deliver financial and environmental sustainability. Your hospital can benefit from the safety and convenience of single-patient use HoverMatts while diverting significant waste and achieving cost savings goals.

Working for you:

Sustainability and performance
you expect

All Reprocessed HoverMatts undergo exhaustive performance testing and criteria to ensure safety and functionality.

Waste Diversion

- Every HoverMatt reprocessed is diverted from the waste stream
- Waste disposal costs are reduced by collecting devices for reprocessing

Quality You Expect

- Decontamination and cleaning with medical-grade cleaning agents
- Visual inspection for device integrity and performance testing for proper inflation
- Rejection of all non-conforming devices
- Tracking with distinct barcodes to ensure devices are never reprocessed beyond maximum number of validated cycles
- Ethylene oxide (EO) exposure validated to a minimum of a 6 spore log reduction using ANSI/AAMMI/ISO 11135:2014 standards as a guidance for EO process validation

Financial Sustainability

- Stryker's unique service model maximizes the quantity of devices returned to your hospital
- Hospitals with comprehensive reprocessing programs have the opportunity to continually increase financial savings through greater participation

Contact your local Sustainability Solutions Representative to integrate HoverMatt into your hospital's reprocessing program.
